

## **AESTHETICS AND PERFORMANCE CAPABILITIES OF GLAZED AND SURFACE COATED BRICK**

**PROVIDED BY GLEN-GERY CORPORATION**

The durability of clay brick and the beauty of ceramic glazes have been combined for millennia to provide accents, highlights and entire facades of many iconic buildings of distinction and prominence. Today, brick coated with glazes and engobes continue to provide and extend the palette of brick colors and textures beyond the traditional, and provide the almost unlimited variety in aesthetics that designers expect. This program will familiarize designers with the manufacturing processes, design capabilities, material characteristics and installation practices for glazed and surface coated brick that provide superior performance in a wide variety of building applications from subways and schools to prisons and palaces.
